

Augusta University High Hazard Chemicals

The [OSHA Laboratory Standard](#) requires that provisions for additional employee protection be included for work involving particularly hazardous chemicals. These chemicals include “select carcinogens”, reproductive toxins, and other chemicals which have a high degree of acute toxicity. Each chemical, compound, drug, functional group or category listed in this document is considered High Hazard Chemicals by Augusta University.

The OSHA Laboratory Standard states for work involving particularly hazardous chemicals, specific consideration be given to the following provisions where appropriate:

- Establishment of a designated area
- Use of containment devices such as fume hoods or glove boxes
- Procedures for safe removal of contaminated waste
- Decontamination procedures

Environmental Health and Safety can assist researchers by providing information on working with these hazardous chemicals. General guidelines and recommendations for the safe handling, use, and control of hazardous chemicals and particularly hazardous chemicals can be found in SDSs and other references such as Augusta University’s Chemical Safety Guide and **Prudent Practices in the Laboratory**.

Establishment of a Designated Area

For projects involving use of any chemical included in Augusta University's High Hazard Chemicals, laboratories should establish a designated area where these chemicals will be used. In some cases, a designated area could be a room out of a suite of rooms, or could mean a fume hood within a laboratory. The idea is to designate one area that everyone in the laboratory is aware of where the high hazard chemicals can be used.

In certain cases of establishing designated areas, Principal Investigators (PIs) and laboratory supervisors may want to restrict use of high hazard chemical to a fume hood, glove box or other containment device. This information should be included as part of the laboratory’s SOPs and covered during the lab and project-specific training.

Establishing a designated area not only provides better employee protection, but can help minimize the area where potential contamination of high hazard chemicals could occur. If a designated area is established, a sign should be posted (on a fume hood for example) indicating the area is designated for use with high hazard chemicals. Most designated areas will have special PPE requirements and/or special waste and spill cleanup procedures as well. These and other special precautions should be included within the lab’s SOPs.

Safe Removal of Contaminated Materials and Waste

Some high hazard chemicals may require special procedures for safe disposal of both waste and/or contaminated materials including collecting in special colored bags. When in doubt, contact EHS at 706-721-2663 to determine proper disposal procedures. Once these disposal procedures have been identified, they should be included as part of the laboratory's SOPs and everyone working in the lab should be trained on those procedures.

Decontamination Procedures

Some high hazard chemicals may require special decontamination or deactivation procedures (such as Diaminobenzidine waste or Ethidium bromide) for safe handling. Review SDSs and the Augusta University Chemical Safety Office website when working with high hazard chemicals to determine if special decontamination procedures are required. If they are required, then this information should be included in the laboratory's SOPs and appropriate training provided to laboratory personnel who work with these chemicals.

OSHA Particularly Hazardous Substances

Select carcinogens, reproductive toxins, and chemicals with high acute toxicity (also known as “highly toxic”) are considered to be high-risk materials and are treated by OSHA as “Particularly Hazardous Substances”. Additional provisions for working with Particularly Hazardous Substances are described in the Chemical Safety Guide.

Carcinogens

Carcinogens are chemicals or physical agents that cause cancer or tumor development, typically after repeated or chronic exposure. Their effects may only become evident after a long latency period and may cause no immediate harmful effects. NOTE: “Select carcinogens”, as previously mentioned, also include those chemicals that are considered suspect carcinogens.

Chemotherapeutic/Antineoplastic Agents

Exposure to chemotherapeutic agents pose a health hazard to lab and animal workers and any waste contaminated with any of these agents must be incinerated in compliance with Georgia EPD regulations. The List of Chemotherapeutic Agents include:

Arsenic (III) Oxide	Daunomycin	Streptozotocin
Azaserine	Hydrochloride	Uracil Mustard
Chlorambucil	Melphalan	
Cyclophosphamide	Mitomycin	

The complete NIOSH List of Antineoplastic and Other Hazardous Drugs in Healthcare Settings 2016 is at, <https://www.cdc.gov/niosh/docs/2016-161/pdfs/2016-161.pdf>

Reproductive Toxins

Reproductive toxins include substances that cause chromosomal damage (mutations) or lethal or malformation effects on fetuses (teratogenesis). Many reproductive toxins cause damage after repeated low-level exposures. Effects become evident after long latency periods.

REPRODUCTIVE TOXINS

OSHA Laboratory Standard Definition: Reproductive toxin means chemicals which affect the reproductive capabilities including chromosomal damage (mutations) and effects on fetuses (teratogenesis).

CHEMICAL NAME	CAS NUMBER
Acetohydroxamic acid	546-88-3
Actinomycin D	50-76-0
All-trans retinoic acid	302-79-4

Chemicals with NFPA Hazard Rating of 3 or 4

The NFPA Hazard Rating system is used to identify the hazards of a chemical and the degree of severity of such hazard relative to health, flammability, and instability. Chemicals with hazard rating of 3 or 4 are considered high hazard in Augusta University. Chemicals that fall under this category and that are in Augusta University's chemical inventory are shown below:

Chemicals in Augusta University Chemical Inventory with NFPA Hazard Rating 3 or 4

CHEMICAL INVENTORY IN DATABASE LISTING OF HIGH HAZARD CHEMICALS

Potentially Explosive Lab Chemicals

Acetyl peroxide	Nitrogen triiodide
Acetylene	Nitroglycerine
Ammonium nitrate	Nitroguanidine
Ammonium perchlorate	Nitromethane
Ammonium picrate	Nitrourea
Ba/Pb/Hg azide (heavy metal azides)	Picramide
Li/K/Na azide	Picric acid (trinitrophenol)
Organic azides	Picryl chloride
Benzoyl peroxide	Picryl sulphonic acid
Bromopropyne	Propargyl bromide (neat)
Butanone peroxide	Sodium dinitrophenate
Cumene peroxide	Succinic peroxide
Diazodinitrophenol	Tetranitroaniline
Dinitrophenol	Trinitroaniline
Dinitrophenylhydrazine	Trinitroanisole
Dinitroresorcinol	Trinitrobenzene
Dipicryl amine	Trinitrobenzenesulphonic acid
Dipicryl sulphide	Trinitrobenzoic acid
Dodecanoyl peroxide	Trinitrocresol
Ethylene oxide	Trinitronaphthalene
Lauric peroxide	Trinitrophenol (picric acid)
MEK peroxide	Trinitroresorcinol
Mercury fulminate, Silver fulminate	Trinitrotoluene
Nitrocellulose	Urea nitrate
Nitrogen trifluoride	

Potentially Explosive Compound Classes

Functional Groups:

Acetylene (-C=C-)	Nitrate (-ONO ₂)
Acyl hypohalites (RCO-OX)	Nitro (-NO ₂)
Azide Organic (R-N ₃)	Aromatic or Aliphatic Nitramine (=N-NO ₂) (-NH-NO ₂)
Azide Metal (M-N ₃)	Nitrite (-ONO)
Azo (-N=N-)	Nitroso (-NO)
Diazo (=N=N)	Ozonides Peracids (-CO-O-O-H)
Diazosulphide (-N=N-S-N=N-)	Peroxide (-O-O-)
Diazonium salts (R-N ₂ ⁺)	Hydroperoxide (-O-O-H)
Fulminate (-CNO)	Metal peroxide (M-O-O-M)
Halogen Amine (=N-X)	

Explosive Salts:

Bromate salts (BrO ₃ ⁻)
Chlorate salts (ClO ₃ ⁻)
Chlorite salts (ClO ₂ ⁻)
Perchlorate salts (ClO ₄ ⁻)
Picrate salts (2,4,6-trinitrophenoxide)
Picramate salts (2-amino-4,6-dinitrophenoxide)
Hypohalite salts (XO ⁻)
Iodate salts (IO ₃ ⁻)

Pyrophoric Lab Chemicals

Aluminum alkyls: R_3Al , R_2AlCl , $RAlCl_2$

Examples: Et_3Al , Et_2AlCl , $EtAlCl_2$, Me_3Al , Diethylethoxy aluminium

Grignard Reagents: $RMgX$ (R =alkyl, aryl, vinyl X =halogen)

Lithium Reagents: RLi (R = alkyls, aryls, vinyls)

Examples: Butyllithium, Isobutyllithium, sec-Butyllithium, tert-Butyllithium, Ethyllithium, Hexyllithium, Isopropyllithium, Methylolithium, (Trimethylsilyl)methylolithium, Phenyllithium, 2-Thienyllithium, Vinylolithium, Lithium acetylide ethylenediamine complex, Lithium (trimethylsilyl)acetylide, Lithium phenylacetylide

Zinc Alkyl Reagents: $RZnX$, R_2Zn

Examples: Et_2Zn

Metal carbonyls: Lithium carbonyl, Nickel tetracarbonyl, Dicobalt octacarbonyl

Metal powders (finely divided): Bismuth, Calcium, Cobalt, Hafnium, Iron, Magnesium, Titanium, Uranium, Zinc, Zirconium

Low Valent Metals: Titanium dichloride

Metal hydrides: Potassium Hydride, Sodium hydride, Lithium Aluminum Hydride, Diethylaluminium hydride, Diisobutylaluminum hydride, Dichloro(methyl)silane

Nonmetal hydrides: Arsine, Boranes, Diethylarsine, diethylphosphine, Germane, Phosphine, phenylphosphine, Silane, Methanetellurol (CH_3TeH)

Non-metal alkyls: R_3B , R_3P , R_3As ; Tetramethylsilane, Tributylphosphine

Used hydrogenation catalysts: Raney nickel, Palladium, Platinum

Activated Copper fuel cell catalysts, e.g. $Cu/ZnO/Al_2O_3$

Finely Divided Iron Sulfides (FeS , FeS_2 , Fe_3S_4), and Potassium Sulfide (K_2S),

Elements:

Phosphorus

s Cesium

Lithium

Potassium

Sodium

Sodium Potassium Alloy (NaK)

Aluminum Phosphide (AIP)
